

With correct setting up diffs will run more quietly & last longer - you just need the right tools.

How to get the perfect contact pattern:

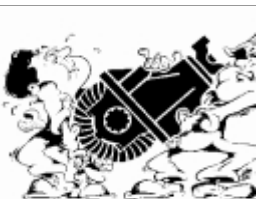

- ◆ Apply Gear Marking Compound to the teeth of the crownwheel with a brush.
- ◆ Rotate the crownwheel & pinion clockwise then counter clockwise.
- ◆ Carefully note the contact pattern where the Gear Marking Compound has been wiped off by the action of the pinion against the crown-wheel.
- ◆ An ideal contact pattern is one located on the centre of the tooth surface.

Brilliant White Gear Marking Compound

- ◆ Easy to apply - easy to remove.
- ◆ Brilliant white guide shows the contact pattern clearly.
- ◆ Ready packed - should be well suited all gear marking needs - a little goes a long way.
- ◆ Suitable for use on any type of diff gearset.
